

Olympics Winter

in Canada

Jiyun Bae

What I intend to prove: What Kind of tendency is Canada growing up in the Olympics?

Charts I need for my provement

- Canada's performance trends over the past 35 years
- Canada's strengths and weaknesses in terms of medal counts by sport
- Rates of men and women in Canada
- Number of medals for women compared to other countries

What we can get from the charts

First of all, we can get a background by a chart of Canada's performance trends over the past 35 years so it becomes a basic set for other charts and information. After that, from the second chart, It will be easier to recognize which sports Canada is stronger and weaker. It is obvious that Canada is good at Winter Sports, but it is hard to know which certain sports Canada is good or better at.

Also, the number and influence of women cannot be left out in changes at the Olympics. The third chart shows how many female participants there are in Canada, and the last chart shows how female participants have affected Canada's growth like medals.

The reason that my charts is efficient

It's easy to see certain changes with neat and clear charts, and it's easy to notice by the difference in obvious colors. Also, a clear difference can be made by putting in the proportion of female athletes and the number of medals they won and comparing them

to other countries. Considering Canada's performance trends, it can focus only on annual growth rates and total medals, but it has differentiated itself by putting a chart of the performance of each event and the proportion of women.
